

Virtual Cardiac Rehab:

Reach More Patients, Strengthen Your Program

With virtual cardiac rehab reimbursement extended through 2027 for both physician offices and hospital outpatient programs, there has never been a better time to go virtual. Our purpose-built technology helps you meet your patients exactly where they are.

Key Benefits

We are committed to protecting the health of your on-site program.

We believe facility-based cardiac rehab is the gold standard. That's why we approach virtual cardiac rehab as a partner – an extension of your care team – helping you reach patients who would otherwise have no cardiac rehab at all.

We take a collaborative approach to patient care.

You determine which patients may be a good fit for virtual, and we manage their day-to-day experience. Along the way, we keep you closely informed, so you remain engaged in their care.

We meet AACVPR guidelines and mirror an on-site cardiac rehab experience.

Our solution addresses every consideration for launching a successful virtual program, including patient safety, exercise prescriptions, medical emergency procedures, and HIPAA compliance.

No ICR program? No problem.

Even without an on-site Pritikin ICR program, you *can* offer home-based virtual cardiac rehab to your patients. Our coaches and educators collaborate closely with your team, so your patients continue to receive high-quality, personalized care without creating an extra burden for your staff.

Complete Patient Toolkit

We provide everything your patients need for cardiac rehab at home – including a cellular-enabled tablet with fully-managed software and tech support – making it easy to join their sessions with just a click of a button.

After completing the program, patients use the provided return envelope to ship their tablet back. The rest of the items are theirs to keep, so they can continue their recovery journey.
